

SYSTEM, METHOD, AND COMPUTER SOFTWARE PRODUCT FOR INSTRUMENT CONTROL AND DATA ACQUISITION, ANALYSIS, MANAGEMENT AND STORAGE

5

ABSTRACT OF THE DISCLOSURE

A system is described for providing an interface enabled to transfer data between
databases that comprises a database that stores data and is associated with a computer
workstation, where the data includes data associated with biological probe arrays; a second
database that stores the data that is associated with a server; and an interface that transfers the
10 data between the databases based, at least in part, upon a user selection.
